

SHRUTI SUTAR

DevOps Engineer

Pune, Maharashtra | shruti.sutar231992@gmail.com | AWS Certified Cloud Practitioner

PROFESSIONAL SUMMARY

DevOps fresher with hands-on experience building CI/CD pipelines, container orchestration with Kubernetes, and cloud infrastructure automation on AWS. Passionate about Agile collaboration, automation, and reducing manual interventions across deployment workflows. Eager to contribute to enterprise-grade infrastructure and work alongside cross-functional teams following Scrum methodologies.

KEY SKILLS

CI/CD:	Jenkins, GitHub Actions — pipeline design, build/test/deploy automation
Containers:	Docker, Kubernetes (Minikube/EKS), Helm — microservices, HPA, Ingress
IaC:	Terraform, Ansible — VPC, EC2, Security Groups, S3
Cloud:	AWS (EC2, S3, VPC, EKS) — infrastructure provisioning & management
Monitoring:	Prometheus, Grafana — custom dashboards, CPU/memory alerting
Version Control:	Git, GitHub — branching, PR workflows, team collaboration
Security:	SonarQube (code quality), Trivy (container image scanning)
Scripting:	Bash, Python (basics) — automation scripts, workflow optimization
OS:	Linux — system administration, CLI, shell scripting
Methodology:	Agile / Scrum — sprint participation, standups, cross-team collaboration

HANDS-ON PROJECTS

End-to-End CI/CD Pipeline with Security Integration

Built a fully automated CI/CD pipeline using Jenkins to build, test, and deploy a Node.js application to AWS EC2. Integrated SonarQube for static code quality analysis and Trivy for Docker image vulnerability scanning — delivering a secure, production-ready deployment workflow.

Tools: Jenkins, Docker, AWS EC2, SonarQube, Trivy, Git, GitHub

AWS Infrastructure Automation with Terraform

Designed and provisioned enterprise-standard AWS infrastructure using Terraform including VPC, EC2 instances, Security Groups, and S3 buckets. Applied IaC best practices to ensure reproducible, version-controlled, and stable infrastructure aligned with network security standards.

Tools: Terraform, AWS (VPC, EC2, S3, Security Groups), Git

Kubernetes Deployment of 3-Tier Microservices Application

Deployed a 3-tier microservices application on Minikube and EKS using Kubernetes YAML manifests for Deployment, Service, and Ingress. Configured Horizontal Pod Autoscaler (HPA) to handle dynamic scaling, improving application stability and availability.

Tools: Kubernetes, Docker, Helm, AWS EKS, Minikube

Monitoring Stack: Prometheus & Grafana on Kubernetes

Installed and configured Prometheus and Grafana on a Kubernetes cluster. Built custom dashboards to visualize CPU and memory utilisation across pods, enabling proactive infrastructure monitoring and alerting.

Tools: Prometheus, Grafana, Kubernetes

EDUCATION & CERTIFICATIONS

M.Sc.

AWS Certified Cloud Practitioner (Foundation)

ADDITIONAL STRENGTHS

- Hands-on experience with enterprise DevOps toolchain: Jenkins, Docker, K8s, Terraform, Ansible, Prometheus/Grafana
- Comfortable participating in Agile/Scrum ceremonies — daily standups, sprint planning, retrospectives
- Security-aware pipeline design: integrated SonarQube and Trivy for code and container scanning
- Automation-first mindset — focused on reducing manual interventions through scripting and IaC
- Quick learner; actively building GitHub portfolio to demonstrate real-world DevOps skills
- Interest in Cloud, Site Reliability Engineering (SRE), and infrastructure best practices
